ProCutter 900 RB

Small and streamlined productivity

The ProCutter is a pipe cutting machine with streamlined productivity. The machine becomes even more productive by connecting with logistics infeed which can be placed either in- or outside. The pipes are cut on hydraulic bogies that make it capable of cutting banana shaped pipes and when lowered, the machine can feed out pipes with the scoops. This machine is produced with proven technology from earlier generation machines that proved cutting accuracy and productivity for a quick ROI.

- 1 **Productive pipe cutting with a small footprint**
- 2 **High precision cutting with pantograph cutting arm**
- 3 **Outfeed with hydraulic sideways off-loading system**

SPECIFICATIONS

➤ ProCutter 900 RB (Imperial)

2" - 36"

5.5 ton [369 lb/ft]

➤ ProCutter 900 RB (Metric)

48 mm - 914 mm

5 ton [550kg/m]

Maximize productivity

with infeed logistics and outfeed table to have the next pipe ready while you're cutting - fully automatic - and having the finished parts ready on the outfeed.

Protecting operators

from harmful fumes and particles by extracting harmful gasses directly from the cutting process and providing extraction through the cutting trolley and main drive.

Customized for operators

of HGG's in-house developed UPC software with a self-explanatory interface and complete touch screen operation which allows new users to learn it in 2 days.
